

SIGNS OF TOXIC CHEMICAL EXPOSURE

A mild chemical exposure can cause burning eyes, nose, throat, chest and skin.

It may cause headache, sweating, stomach aches and diarrhea.

A severe chemical exposure may cause blurred vision, coughing, fainting or difficulty breathing.

If you have inhaled a chemical, immediately move to fresh air.

If the chemical soaks clothing or skin, shower and strip right away.

If eyes are splashed with liquid chemical or gas, flush eyes with water.

Get medical care immediately.
